IN THE CLAIMS

1. (Currently Amended) A method comprising:

obtaining from an index a search result associated with a current search query, the search result comprising a first article identifier;

providing a content display comprising a second article identifier;

~~determining whether to update the content display with the search result, the determining comprising~~ comparing the current search query to a previous search query associated with the content display; ~~and~~

responsive <u>at least in part</u> to <u>the current search query and the previous search query differing by more than a predetermined amount</u> ~~a positive determination to update the content display~~, updating the content display<u>; and</u>

<u>responsive at least in part to the current search query and the previous search query not differing by more than the predetermined amount, not updating the content display</u>.

2. (Original) The method of claim 1, wherein the first article identifier comprises a first relevancy measure, and the second article identifier comprises a second relevancy measure.

3. (Canceled)

4. (Currently Amended) The method of claim <u>1</u> [[3]], further comprising updating the content display <u>responsive at least in part to</u> ~~when~~ the first relevancy measure <u>exceeding</u> ~~exceeds~~ the second relevancy measure.

5. (Canceled)

6. (Currently Amended) The method of claim 1, <u>wherein the predetermined amount is expressed as a percentage.</u> ~~further comprising updating the content display when the current search query and the previous search query differ by more than a predetermined percentage or amount.~~

7.   (Currently Amended) The method of claim 1, wherein the predetermined amount is expressed as a number of query terms. comparing the current search query to the previous search query comprises determining whether each term in the current search query is also in the previous search query.

8.   (Currently Amended) The method of claim 1, wherein the predetermined amount is expressed as a specified percentage of terms in the current search query. wherein comparing the current search query to the previous search query comprises determining the percentage of terms in the current search query that are also in the previous search query.

9.   (Currently Amended) The method of claim 1, further comprising updating the content display responsive at least in part to an outcome of a comparison between wherein determining whether to update the content display comprises comparing the first article identifier to the second article identifier.

10.   (Currently Amended) The method of claim 9, wherein the outcome is that further comprising updating the content display when the first article identifier and the second article identifier are different.

11.   (Currently Amended) The method of claim 1, further comprising updating the content display responsive at least in part to an outcome of wherein determining whether to update the content display comprises monitoring a mouse pointer associated with the content display.

12.   (Currently Amended) The method of claim 11, wherein the outcome is that further comprising updating the content display when the mouse pointer is not active in the content display.

13.   (Currently Amended) The method of claim 11, wherein the outcome is that further comprising updating the content display when the mouse pointer is not approaching the content display.

14.   (Canceled).

15.   (Previously Presented) The method of claim 1, wherein updating the content display comprises replacing the first article identifier with the second article identifier.

16.   (Previously Presented) The method of claim 1, wherein the first article identifier comprises a first plurality of article identifiers and the second article identifier comprises a second plurality of article identifiers and further comprising replacing the second plurality of article identifiers with the first plurality of article identifiers.

17.   (Previously Presented) The method of claim 1, wherein the first article identifier comprises a first plurality of article identifiers and the second article identifier comprises a second plurality of article identifiers and further comprising merging the first plurality of article identifiers with the second plurality of article identifiers.

18.   (Original) The method of claim 1, wherein the index comprises a global index.

19.   (Original) The method of claim 1, wherein the index comprises a local index.

20.   (Original) The method of claim 1, wherein the index comprises a global index and a local index.

21.   (Currently Amended) A tangible computer-readable medium on which is encoded computer program code, the computer program code comprising:

> program code for obtaining from an index a search result associated with a current search query, the search result comprising a first article identifier;
> program code for providing a content display comprising a second article identifier;
> program code for ~~determining whether to update the content display with the search result, the determining comprising~~ comparing the current search query to a previous search query associated with the content display; ~~and~~
> program code for updating the content display responsive <u>at least in part</u> to <u>the current search query and the previous search query differing by more than a</u>

predetermined amount ~~a positive determination to update the content display~~, and not updating the content display responsive at least in part to the current search query and the previous search query not differing by more than a predetermined amount.

22.   (Original) The computer-readable medium of claim 21, wherein the first article identifier comprises a first relevancy measure, and the second article identifier comprises a second relevancy measure.

23.   (Canceled)

24.   (Currently Amended) The computer-readable medium of claim 21 [[23]], further comprising program code for updating the content display responsive at least in part to ~~when~~ the first relevancy measure exceeding ~~exceeds~~ the second relevancy measure.

25.   (Canceled).

26.   (Currently Amended) The computer-readable medium of claim 21, wherein the predetermined amount is expressed as a percentage. ~~further comprising updating the content display when the difference between the current search query and the previous search query is greater than a predetermined percentage or amount.~~

27.   (Currently Amended) The computer-readable medium of claim 21, wherein is expressed as a number of query terms. ~~program code for comparing the current search query to the previous search query comprises program code for determining whether each term in the current search query is also in the previous search query.~~

28.   (Currently Amended) The computer-readable medium of claim 21, wherein the predetermined amount is a specified percentage of terms in the current search query. ~~wherein program code for comparing the current search query to the previous search query comprises program code for determining the percentage of terms in the current search query that are also in the previous search query.~~

App. No. 10/815,060   - 5 -

29.   (Currently Amended) The computer-readable medium of claim 21, further comprising updating the content display responsive at least in part to an outcome of a comparison between ~~wherein program code for determining whether to update the content display comprises program code for comparing~~ the first article identifier to the second article identifier.

30.   (Currently Amended) The computer-readable medium of claim 21, wherein the outcome is that ~~further comprising program code for updating the content display when~~ the first article identifier and the second article identifier are different.

31.   (Currently Amended) The computer-readable medium of claim 21, further comprising updating the content display responsive at least in part to an outcome of ~~wherein program code for determining whether to update the content display comprises~~ program code for monitoring a cursor associated with the content display.

32.   (Currently Amended) The computer-readable medium of claim 31, wherein the outcome is that ~~further comprising program code for updating the content display when~~ the mouse pointer is not active in the content display.

33.   (Currently Amended) The computer-readable medium of claim 31, wherein the outcome is that ~~further comprising program code for updating the content display when~~ the mouse pointer is not approaching the content display.

34.   (Canceled).

35.   (Previously Presented) The computer-readable medium of claim 21, wherein program code for updating the content display comprises program code for replacing the first article identifier with the second article identifier.

36.   (Previously Presented) The computer-readable medium of claim 21, wherein the first article identifier comprises a first plurality of article identifiers and the second article identifier comprises a second plurality of article identifiers and further comprising program code

App. No. 10/815,060   - 6 -

for replacing the second plurality of article identifiers with the first plurality of article identifiers.

37. (Previously Presented) The computer-readable medium of claim 21, wherein the first article identifier comprises a first plurality of article identifiers and the second article identifier comprises a second plurality of article identifiers and further comprising program code for merging the first plurality of article identifiers with the second plurality of article identifiers.
